1 INTRODUCTION

1.1 Overview

Taking in brief about my Project, I have created this website for the people who want to start learning programming basic. For now my website contain the python basic and link to some good courses for beginning with basic of Python. In coming time I am thinking of including more programming language like Java, C++, etc.

1.2 Purpose

The use of the project is that in my website u will get all the information for free and all the information about programming language from basic to advance in one place. Also the website will give freedom to the viewers to share there codes and also visit many good courses and playlist link directly.

2 LITERATURE SURVEY

2.1 Existing Problem

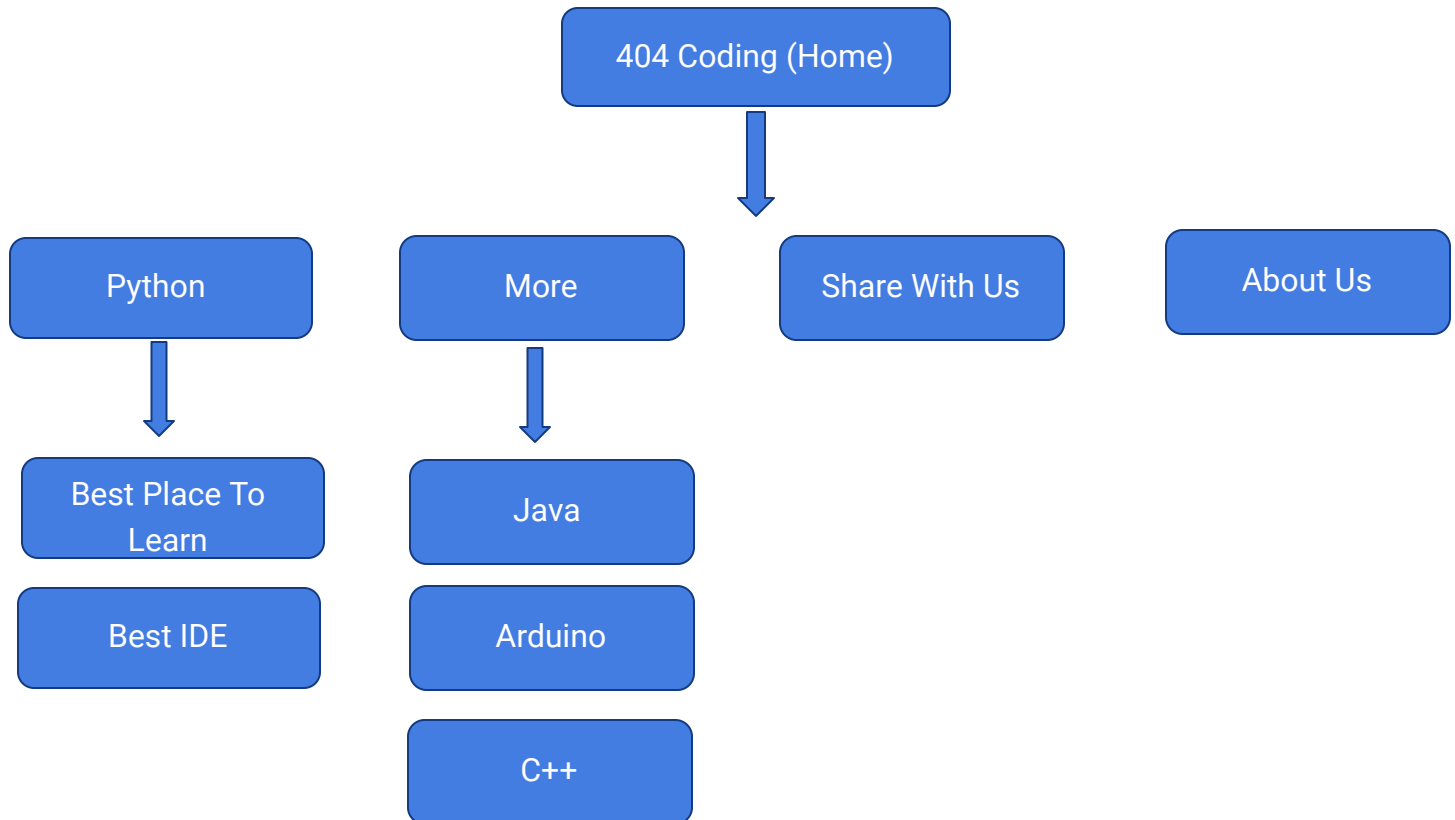

As a student I have always been finding many website where I can finding all the things in one place which makes the learning process simple and easy but could not find any one.

2.2 Proposed Solution

For the existing problem I have proposed a simple solution, it is that making a website that contain all the important programs/code and the important links in one place so that its easy to find it.

3 THEORITICAL ANALYSIS

3.1 Block Diagram

3.2 Hardware/ Software Designing

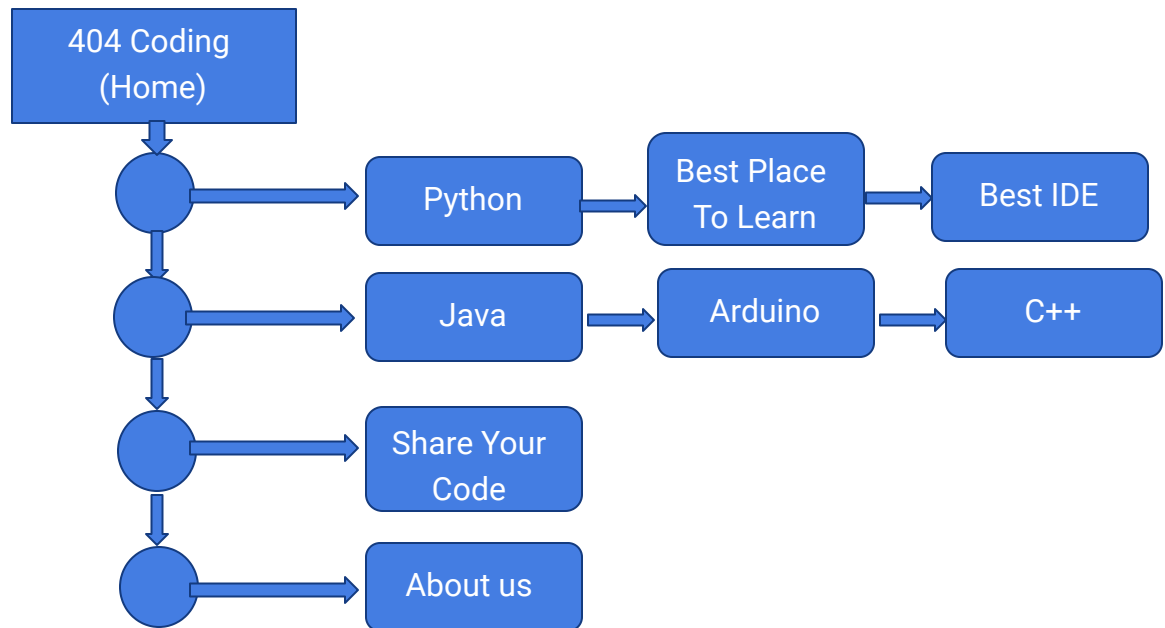

There is no Hardware used.

The Software used is Wordpress to make the Website and Elementor plugin to design templates as per our need and some of the elementor addons to add some function.

4 EXPERIMENTAL INVESTIGATIONS

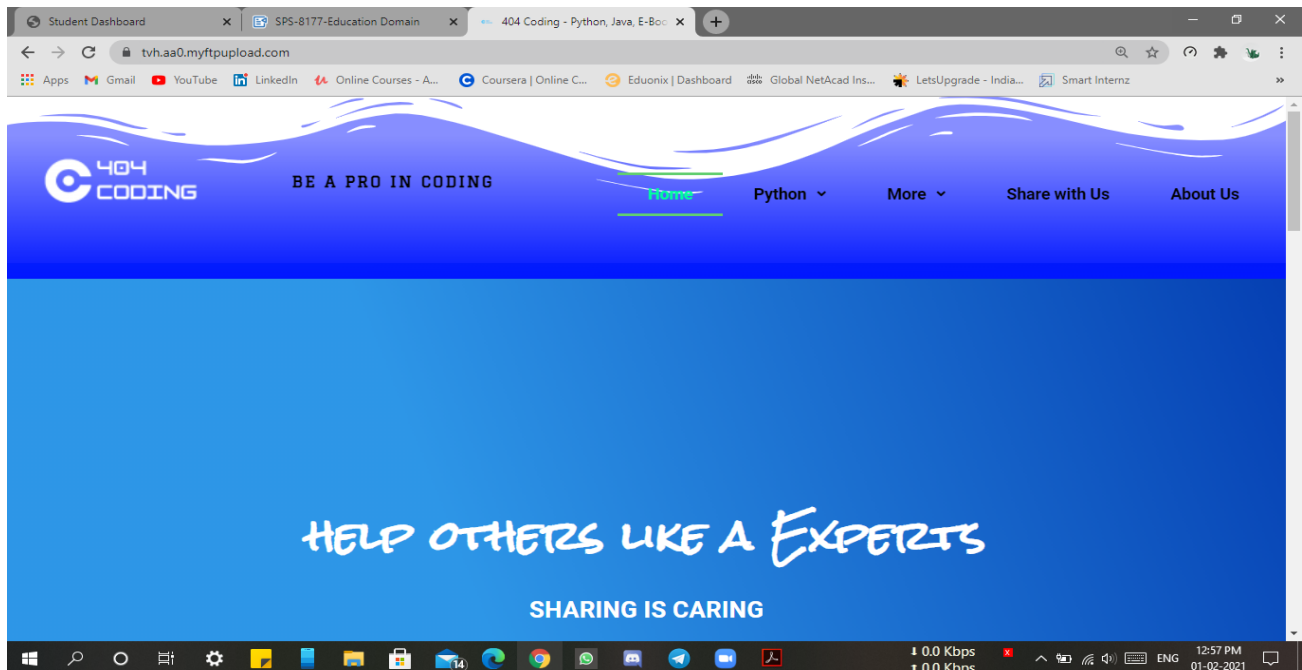

We have seen many website that help with coding and have gone through it but could not find many important things in one place.

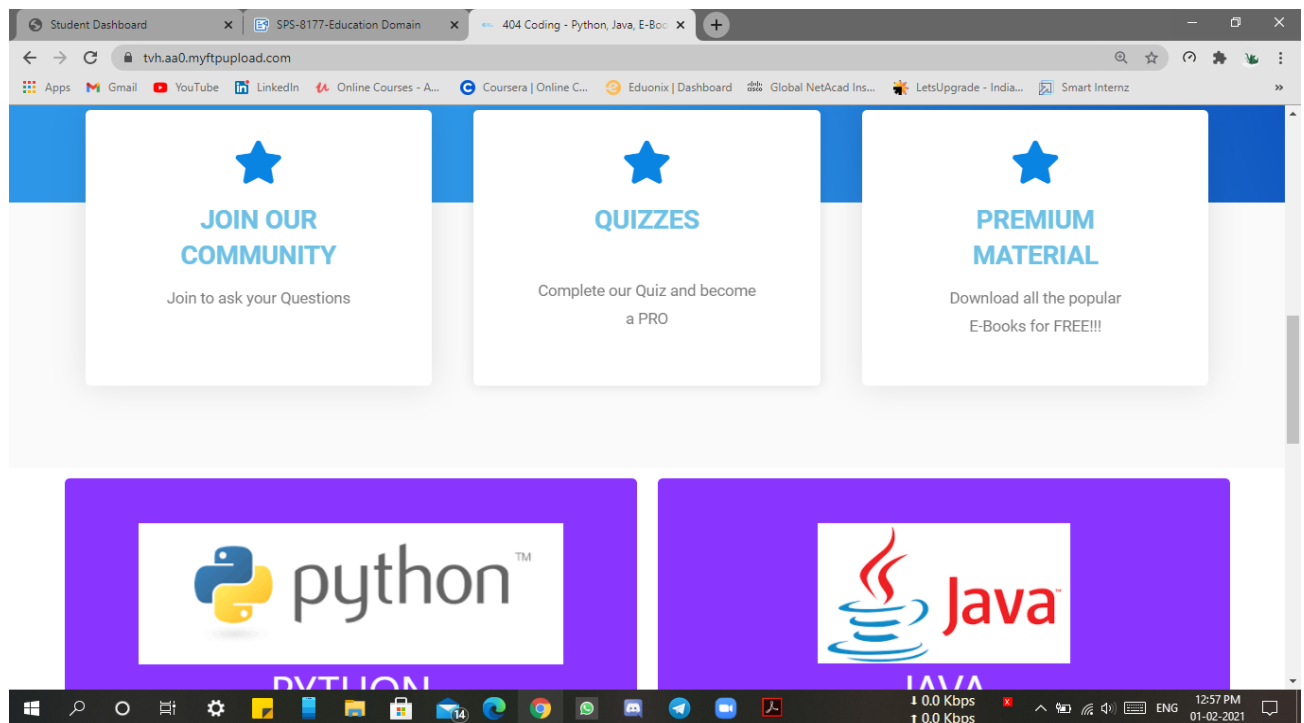

5 FLOWCHART

6 RESULT

The final output that our site gives is that students can find all the important links in one place and it will help in make them learn peacefully.

Learn Python from Best

Best Website to Learn Python

CodeCademy

If you like interactive learning, then there is no better place than Codecademy. They first teach you theory in as few words as possible and then ask you to write code online using that concept. The best thing is you don't need to do any setup like installing Python in your machine.

7 ADVANTAGES AND DISADVANTAGES

Taking about advantages our will help all to learn basic and advance of programming in one place. we have included many link to get the best information about the language.

Taking about the disadvantages it will take time to update all the inform that we have for now only python basic is included on our website we are planning to add many more programming language to our site like Java, C++, etc.

8 APPLICATIONS

This solution is specially designed for the people/students who want to develop there skills in programming languages like Python, Java, C++, and many more....

9 CONCLUSION

The conclusion is that while find for a good learn website we could not find one that gives everything in one place. So we have tried our best to make a website where the people who are in find a where to start with can find everything in one place.

10 FUTURE SCOPE

In future we will add more more programming language to our website. For now we have basics of Python language and all the things related to start with basic learn. We have already started working on contain for Java, C++, and many more programming languages and that will be add soon.

11 BIBILOGRAPHY

We have visited many website in search of contain and understanding but we have not copy pasted any of the contain that is on others website we have tried to explain everything in basic language .
